

Exploratory Analysis of Carbon Majors Emissions (1965–2022)

The Carbon Majors Emissions dataset, developed by CDP and the Climate Accountability Institute, contains the annual production and emissions data from over 120 of the world's most influential fossil fuel companies from 1965 to 2022.

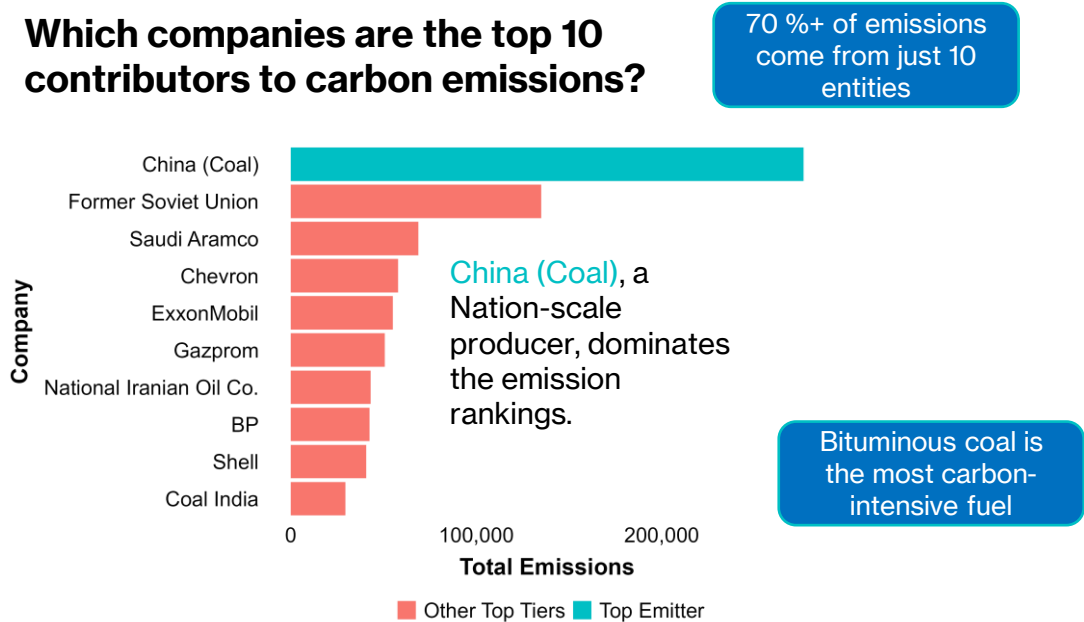

How do the carbon emissions trends compare across different years?

Which ownership type contributes the most to total emissions?

Which companies are the top 10 contributors to carbon emissions?

What are the total emissions from fossil fuels, and which has the highest average?
